Hindi

INTERESTS

DJ music 🎶

eCommerce web application

I have created an e-commerce web application with a **MERN** stack
With the help of React J's we are creating Frontend part handling API and server with Express created a real-time environment with node.js inserted data in MongoDB cloud Atlas

React native expo application

I have create full stack application with react native and firebase using expo CLI
Created beautiful user interface with react native and connected with serverless backend with firebase
Application based on event booking system
the user can advertisement their event and the parties easily with that application..
The current event show on Google map we are using Google map API to show the current event in map with the help of map models any user can access event descriptions and time and status...
